

Risk Questionnaire

Why should I use the Risk Questionnaire?

Understanding your attitude to investment risk is an important factor in making a decision about investments.

The questionnaire has been designed to measure investment risk tolerance, which is your emotional response to changes in the value of your investments. Your attitude to investment risk is just one factor you should take into account so it is essential to have a discussion with your adviser to consider, amongst other things, your actual ability to withstand changes in the value of your investments (capacity for loss), your financial goals and risks other than investment risk.

The questionnaire is not suitable if you are unwilling to take any investment risk. You should let your adviser know if you think that you fall into this category.

How should I use Risk Questionnaire?

The risk questionnaire is provided to enable a conversation about risk tolerance between you and your adviser.

You can complete the attached questionnaire with your answers and pass it to your adviser, who will calculate your risk score.

Following discussion of your answers with your adviser, you can then agree your risk level. You do not necessarily need to select the same level as indicated by the risk questionnaire if, for example, other factors such as your capacity for loss indicate that another category is more appropriate for you. Additionally, the questionnaire is designed to assess your overall investment risk tolerance. You may decide to take more or less investment risk for a particular investment.

What are the limitations of the Risk Questionnaire?

The questionnaire will help you to understand your attitude to investment risk but it is important to understand that there are some limitations.

- Education, not advice this tool is a guide for illustrative purposes only
- Limits this tool doesn't look at other factors, such as your stage of life, your financial goals or the size of financial loss you are able to withstand
- Think bigger risk is just one of the things you need to consider when you're making investment decisions.
 For example, the term of your investment and whether you might want to access your investments before the end of this term are also important
- Talk to an expert discuss the results with your adviser before taking action

Who are Oxford Risk?

Oxford Risk Research & Analysis Ltd are an independent company who are acknowledged experts in risk profiling. Their risk analysis expertise and tools are utilised by a wide range of financial services companies and in the UK alone over 1500 assessments are conducted each day using Oxford Risk questionnaires.

Higher risk - A risk score of (42-50) would put you in the higher risk category. People in this category are very comfortable with investment risk. They aim for high long-term investment returns and do not overly worry about periods of poorer performance in the short to medium term. Ordinarily these portfolios can be subject to the full extent and frequency of stock market fluctuations.					score	risk level
